

bridged compounds

Q 0060

12 - 121

**Bromination of 4-endo-8-exo-Diiodobrexane.** — The rapidly proceeding bromination of the title compound (I) is accompanied by a rearrangement giving a mixture of diastereomeric dibromobrendanes, thus representing a convenient method for the preparation of bifunctional brendane derivatives. A mechanistic suggestion is given and confirmed in parts. — (BOBYLEVA, A. A.; LUKOVSKAYA, E. V.; PEKHK, T. I.; BELIKOVA, N. A.; Zh. Org. Khim. 27 (1991) 6, 1360-1361; Mosk. gos. univ. im.
